## lacksquare Avoid large layout shifts -1 layout shift found

These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to windowing. Learn how to improve CLS CLS

| Element Layout shift sco                    | re |

| TTFB         | 23%      | 200 ms |
| Load Delay   | 59%      | 520 ms |
| Load Time    | 8%       | 70 ms  |
| Render Delay | 10%      | 90 ms  |

| Avoid serving legacy JavaScript to modern browsers  | ^             |
|---|---------------|
| Polyfills and transforms enable legacy browsers to use new JavaScript features. However, many aren't necessary for modern browsers. For your bundled JavaScript, adopt a modern script deployment strategy using module/nomodule fedetection to reduce the amount of code shipped to modern browsers, while retaining support for legacy browsers. Leasto use modern JavaScript FCP LCP |               |
| All text remains visible during webfont loads   | ^             |
| Leverage the font-display CSS feature to ensure text is user-visible while webfonts are loading. <u>Learn more about</u> font-display.  | <u>ıt</u>     |
| Lazy load third-party resources with facades  | ^             |
| Some third-party embeds can be lazy loaded. Consider replacing them with a facade until they are required. Learn ho   | <u>w to</u>   |
| Largest Contentful Paint image was not lazily loaded  | ^             |
| Above-the-fold images that are lazily loaded render later in the page lifecycle, which can delay the largest contentful p <u>Learn more about optimal lazy loading.</u> <u>LCP</u>  | aint.         |

| Uses passive listeners to improve scrolling performance   | ^             |
| Consider marking your touch and wheel event listeners as passive to improve your page's scroll performance. <u>Learn</u> <u>about adopting passive event listeners</u> .  | <u>1 more</u> |
| Avoids document.write()   | ^             |
| For users on slow connections, external scripts dynamically injected via document.write() can delay page load by of seconds. Learn how to avoid document.write().   | / tens        |
| Avoid long main-thread tasks  | ^             |
| Lists the longest tasks on the main thread, useful for identifying worst contributors to input delay. <u>Learn how to avoid longers tasks</u> <u>TBT</u>  | <u>ong</u>    |
| Avoid non-composited animations   | ^             |
| Animations which are not composited can be janky and increase CLS. <u>Learn how to avoid non-composited animations</u>  | S CLS         |

Has a <meta name="viewport"> tag with width or initial-scale

A <meta name="viewport"> not only optimizes your app for mobile screen sizes, but also prevents a 300 millisecond delay to user input. Learn more about using the viewport meta tag.

Page didn't prevent back/forward cache restoration

Many navigations are performed by going back to a previous page, or forwards again. The back/forward cache (bfcache) can speed up these return navigations. Learn more about the bfcache
